Society's view of patient privacy is based on age, gender, etc. may vary according to demographic characteristics. In this study, it was aimed to determine the community's perspective on patient privacy. For this purpose, a survey was tried to be applied to all segments of society. But both the conditions caused by the pandemic and the restrictions that were made limited the efficient retrieval of data. However, in light of the data collected, Cronbach's Alpha reliability coefficient of the 36-question scale was found to be 0.80. as a result of this research, it was concluded that demographic data affects patient privacy, and the outlook on privacy changes on the basis of the scale question, and some recommendations were made in this direction.</p>
